News Letter - Volume No 6

Six Ways to Prevent the Unintentional Water Wastage

If all the water on earth totals a 100 litres, only 3 litres of it is fresh water. The remaining 97 litres is saline seawater. Moreover, 2 of the 3 litres of fresh water is locked in the Arctic and Antarctic. Only 1 litre is available for human consumption.

So, stop wasting water, NOW!

Using a tumbler will use 0.5 litres of water as against the 45 litres that flow from the tap in the 5 minutes it takes you to brush your teeth.

Running the tap for 2 minutes while you soap your hands when washing them wastes 18 litres of water. A half-filled basin of water uses only 2 litres.

Using a shaving mug will prevent the needless wastage of water from a flowing tap as you 'lather up'.

If you leave the shower running while you soap up, you could be wasting as much as 90 litres of water during one shower.

When you use a hose to water plants, you use 40 litres in a minute. Using a watering can prevents unnecessary water wastage.

Two buckets of water should suffice to clean a car. And these would use a mere 18 litres of water. Running a hose for 10 minutes would use 400.

Jain Farms contributes Rs.2 lakhs for TirupathiTirumalaDevasthanam for the purpose of Plantation under Sri VenkateswaraVanabhivridhi Scheme, Tirupathi and planted the seedlings near "SilaTheranam"

and planted the seedlings near Shambharam

RESALE OF BAGALUR PLOTS

Customers who are interested to resale their plots can contact us at
resaleplots@gmail.com

Please Note :-

1. Only genuine resale customers contact
2. Please send mail along with your confirmed offer
3. Please send mail only - no telephonic enquirers will be entertained

- SUITABLE FOR**
- RESIDENTIAL APARTMENT
 - CORPORATE GUEST HOUSE
 - SMALL FAMILY
 - STUDENTS
 - WEEK END RETREAT
 - SENIOR CITIZENS

Facilities and amenities include:

- Shuttle Services to Hosur
- 24 Hrs Restaurant
- Health Club / Gym
- Jacuzzi & Sauna
- Library & Snooker
- Indoor Games
- Children Play Area
- Business Centre
- Wifi Connection
- Utility Store
- 24 Hrs Back up Power
- Yoga cum Meditation Hall
- Nursing Room & Ambulance

Presenting Sukhshanthi Apartments from Jain Farms

■ At Sukhshanthi, you too can live that full, worry-free life. ■ Sukhshanthi is more than just as apartment for the senior citizen. It is a premier lifestyle option that makes aging a positive privilege. ■ Situated just 44 kilometres from Bangalore, at Bangalur off. Sarjapur Road with the same beautiful weather, Sukhshanthi is the best place to live for senior citizens. At Sukhshanthi, you'll find all the amenities you require. ■ Come alive in your golden years at Sukhshanthi.

For more details, please feel free to contact us :

Save the Sparrow - Mohammed Dilawar

On Feeding Birds

Many birds including the common House Sparrow (*Passer domesticus*) are decreasing worldwide due to lack of food. Birds are finding it increasingly difficult to find food and water for their day-to-day requirements. It's important that we feed birds responsibly and safely. By following a few simple guidelines, we can all play a valuable role in helping the birds that visit us to overcome periods of natural food shortage and be in good breeding condition. Ideally, food should be provided all year round for birds, but in winter and summer, birds need us more as their natural food and water sources decrease.

Feeding birds by using a feeder helps in maintaining hygiene, avoids wastage of grains, and helps birds get continuous source of food all year. Hygiene is important. Clean up spilt grain and uneaten food; this will reduce the spread of disease. During the rainy season, keep feeders in places where they will not come in contact with water. Remember not to install feeders near bushes as bushes are a perfect hiding place for cats. Before you start feeding birds, here are some important things that you need to know:

1. Don't feed birds stale or oily foods. Foods made from whole wheat should also be avoided.
2. Birds enjoy *bajra*(pearl millets), rice and groundnuts.
3. Birds also love cooked rice (without salt or spices). Oil-free chapatti is another good option.
4. Do not feed birds bread as it does not contain the necessary protein and fat that birds need from their diet. Therefore breads only act as empty fillers.
5. Birds also enjoy eating fruits like papaya, banana and sweet lime. If you start feeding birds, don't stop abruptly as they come from faraway places for the food you provide. Feeding birds will help you watch and study birds of different kinds from your locality.

Rain Water Harvesting Techniques

There are two main techniques of rain water harvestings.

- Storage of rainwater on surface for future use.
- Recharge to ground water.

The storage of rain water on surface is a traditional techniques and

The storage of rain water on surface is a traditional technique and structures used were underground tanks, ponds, check dams, weirs etc.

Recharge to ground water is a new concept of rain water harvesting and the structures generally used are:-

Pits:- Recharge pits are constructed for recharging the shallow aquifer. These are constructed 1 to 2 m, wide and to 3 m. deep which are filled back with boulders, gravels, coarse sand.

Trenches:- These are constructed when the permeable stream is available at shallow depth. Trench may be 0.5 to 1 m. wide, 1 to 1.5m. deep and 10 to 20 m. long depending up availability of water. These are back filled with filter materials.

Dug wells:- Existing dug wells may be utilised as recharge structure and water should pass through filter media before putting into dug well.

Hand pumps:- The existing hand pumps may be used for recharging the shallow/deep aquifers, if the availability of water is limited. Water should pass through filter media before diverting it into hand pumps.

Recharge wells:- Recharge wells of 100 to 300 mm. diameter are generally constructed for recharging the deeper aquifers and water is passed through filter media to avoid choking of recharge wells.

Recharge Shafts:- For recharging the shallow aquifer which are located below clayey surface, recharge shafts of 0.5 to 3 m. diameter and 10 to 15 m. deep are constructed and back filled with boulders, gravels & coarse sand.

Lateral shafts with bore wells:- For recharging the upper as well as deeper aquifers lateral shafts of 1.5 to 2 m. wide & 10 to 30 m. long depending upon availability of water with one or two bore wells are constructed. The lateral shaft is back filled with boulders, gravels & coarse sand.

Spreading techniques- When permeable strata start from top then this technique is used. Spread the water in streams/Nalas by making check dams, nala bunds, cement plugs, gabion structures or a percolation pond may be constructed.

Benefits of Artificial Recharge in Urban Areas:

- Improvement in infiltration and reduction in run-off.
- Improvement in groundwater levels and yields.
- Reduces strain on Special Village Panchayats/ Municipal / Municipal Corporation water supply.
- Improvement in groundwater quality.
- Estimated quantity of additional recharge from 100 sq. m. roof top area is 55.000 liters.

National Flower of India

Lotus, botanically known as the *NelumboNucifera* is the national flower of India. The Lotus plant is basically an aquatic plant with wide floating leaves and bright aromatic flowers which grow only in shallow waters. The Lotus plant has floating

leaves and flowers. It has long aerated stems. The lotus flowers are extremely beautiful with an overlapping proportional motif of petals. It is considered to be a sacred flower and occupies unique position in the art and mythology of ancient India. This flower has been an auspicious symbol of Indian culture since time immemorial.

Choice of Lotus As National Flower

The Lotus Flower symbolizes divinity, fertility, wealth, knowledge and enlightenment. It is also regarded as a symbol of triumph as it can survive to regeminate for thousands of years. Lotus represents long life, honour, and good fortune. Untouched by the impurity despite growing in mud, the flower is also meant to symbolize the purity of heart and mind. It holds additional significance for Hindus, as it is regarded as the symbol of many Gods and Goddesses and is often used in religious practices. It was because of these noble meanings and cultural significance that made the founding fathers of modern India enshrine the lotus in the Constitution as the National Flower.

Cultural Significance of Lotus

From ancient times the lotus has been considered to be a sacred symbol in Asian traditions representing sexual purity. It is also regarded as the symbol of purity and divinity by several religions. Hindus relate it to their Almighty, Vishnu, Brahma, Lakshmi and Sarasvati who are often depicted sitting upon this pious flower. As Lotus also stands as the symbol of divine beauty, it is used as a symbol to

describe the beauty of Lord Vishnu by referring him as the 'Lotus-Eyed One'. In the Hindu Mythology, the unfolding petals of Lotus signify the expansion of the soul. As the Lotus carries piousness despite growing from the mud, it is said to represent a caring spiritual promise. The Buddhists consider the Lotus Flower to be sacred and auspicious as the flower stands for faithfulness in their religion. The lotus plant has also been cited as a sacred flower extensively in the ancient Puranic and Vedic literature.

Lotus Trivia

- Apart from India, Lotus is also the national flower of Vietnam.
- In Egypt the Lotus Flowers are considered to auspicious because they are regarded as the symbol of Sun God.
- Lotus seeds are medicinal in nature and are used for the treatment of kidney, spleen, and heart ailments. They are also considered beneficial in the treatment of Leucorrhoea, palpitation and insomnia.
- Lotus seeds are also used as antidotes in mushroom poisoning

- Lotus seeds are also used as antidotes in mushroom poisoning.

The seeds, leaves and tubers of the Lotus Flower are edible

Mail from Ms.Sujatha Rajshekar

Dear Ms.Nalini and Mr. Jain

I have been in touch with Mr.Sathiamoorthy and understand that my house at Jain Farms is ready for occupation. The architect is visiting the house tomorrow and will issue the requisite completion certificate to you.

We are satisfied with the construction quality and wish to thank Jain Farms for all the effort.As you are aware, this house has been constructed for my parents and they will be living at M 51 Jain Farms once possession is given. I am sure the staff at Jain Farms will make their stay peaceful and enjoyable.

Also a special word of thanks to Mr.Sathiamoorthy and Mr. Chandrasekhar who have been extremely helpful and co-operative during the construction phase.

Wishing Jain Farms progress and prosperity!!!

Comments from Jain Farms visitors

1. **Mr.Sandipan&Ms.Deepika:**

"A great weekend breaks at a very reasonable price. A true stress reliever and enjoyment, Wish you all the best"

2. **Mr.Jayanth&Mr.Suhas:**

"The package was very good. Especially the hosts were very understanding and hospitable unlike other places. Food was good but can be improved. The cottage was very nice but the door needs to be strong. Overall a great experience."

3. **Mr. G. Srinivas:**

"Enjoyed our weekend stay. Very courteous service, prompt in responding"

4. **Ms.SnehalDhamone:**

"The place is really very good and exciting. Enjoyed being here very homely and fantastic farm."

5. **Mr.VinayPai:**

"Very nice place may be next time we can have boat ride too"
